Flight Test Internship

For its engineering division Pipistrel Vertical Solutions is looking for an intern to join its Flight Test department in Ajdovščina, Slovenia. In your role, you will support experimental, development and certification flight test activities, reporting to a Flight Test Engineer. You will be able to acquire knowledge and experience in the discipline of flight testing.

Your role:
- Support flight test planning, aircraft configuration management and prototype maintenance documentation.
- Collaborate with Flight Test Instrumentation engineers for FTI testing, calibration and installation.
- Participate in flight test briefing and de-briefings.
- Perform analysis of flight test data and write technical reports.
- Participate in the development of in-house developed tools for flight test data analysis and flight test operations management.

What do we expect from the candidate?
- University student in an engineering or scientific discipline, preferably aerospace.
- You have preferably taken courses in flight mechanics, aircraft performance, aircraft design and aircraft systems.
- You have programming/scripting skills (MATLAB, Python, or similar).
- Expected to work in a safe manner in accordance with established operating procedures and practices.
- Willing to develop the capability to work under limited supervision and under tight schedules.
- Any flight operations or piloting experience is a plus.
- Willingness to travel out of company base location for test campaigns.
- Very good knowledge of the English language.

The first available starting date is February 2023 and the ideal duration is 6 months. Submit your application including a CV and a short cover letter to Alberto Favier:
